In regard to Hyperion Building in our State -
Please - Think this thru as with the emission
they will discharge - the lives it is going to affect &
the damage to our farm ground and families that
will be torn from their roots in South Dakota.

My husband has emphysema and is on
oxygen all the time and altho his quality of life is
on the down side now we worry about our
children and grandchildren - some of who have
Allergis. This is about the lives of so many and
we hope to have this place they live in one
of betterment not to make it worse for them.

We feel the refinery needs to be in a more
isolated area if they want to build one and
we also know they say it will bring jobs but
is this better than the health of our state?
I think not! Also we are concerned about the
ground water supply - we need less Chemicals
in the ground, not more. Everyone should be
concerned about this.

I really doubt our locale would have
many job offers and I think a lot of false
statements have been made over all this hub-bub!

Lets keep our sedate little Community just
as it is and keep our families healthy and free
from all the pollution.

I know you infierre have a lot of hard
decisions to make and I pray for you all to come
up with the right one.

Sincerely
Barbathy Olson - Akron, Ia
