1.0 Background

The Air Quality Program within the South Dakota Department of Environment and Natural Resources (DENR) implements federal air quality programs. There are several methods by which the U.S. Environmental Protection Agency (EPA) gives states approval to implement federal air quality programs. The more traditional method is for states to adopt rules and submit the state rules to EPA for implementation into what is known as a state implementation plan (SIP). For this process, EPA reviews the state's rules to determine if the rules are equivalent to the federal regulations. If the state's rules are equivalent, EPA approves the state's rules through a federal register notice.

A second method for administrating a federal air quality program is to request delegation of the program. The first step in requesting delegation is to adopt state rules that are equivalent to the federal regulations. Adopting the federal regulations by reference is the simplest method DENR has found to achieve this goal.

A third method for administrating a federal air quality program is to have the program approved. As with the first two methods of implementing a federal air quality program, the state must adopt rules that are equivalent to the federal program and submit the rules to EPA for approval.

The proposed revisions to South Dakota's Air Pollution Control Program are discussed in the following chapters and may be viewed in Appendix A.

2.0 Chapter 74:36:01 – Definitions

Chapter 74:36:01 defines the terms used throughout Article 74:36 – Air Pollution Control Program. EPA approved sections 74:36:01:01 through 74:36:01:21 of this chapter into South Dakota's SIP. The definitions in Chapter 74:36:01 are reviewed periodically to ensure they are up-to-date and consistent with the other Air Quality Program chapters.

There are six definitions in Chapter 74:36:01 that reference federal regulations. The federal regulations are periodically updated to ensure these definitions are consistent with the federal regulations. For example, the definition of a volatile organic compound is revised periodically by EPA by adding compounds to the list of organic compounds that have negligible photochemical reactivity, and therefore, are not considered a volatile organic compound. The sections in Chapter 74:36:01 that require updating the reference date to the most current version of the federal reference as of July 1, 2014, involve the following:

1. 74:36:01:01(8);
2. 74:36:01:01(29);
3. 74:36:01:01(67);
4. 74:36:01:01(73);
5. 74:36:01:05; and
6. 74:36:01:20.

Based on DENR's experience, certain modifications to existing operations at permitted facilities result in an insignificant increase in air pollution. As such, South Dakota regulations identified these sources as insignificant activities. Insignificant activities were not required to be included in an operating or construction permit. However, South Dakota's regulations contained a "catch all" clause that stated an emission unit that was applicable to a federal or state standard could not be considered insignificant regardless of its insignificant increase in air pollution. In the past few years, EPA has promulgated several federal regulations covering these small sources of air pollution (e.g. generators, boilers, gas dispensing facilities, etc.). As such, South Dakota's "catch all" clause is requiring these small sources of air pollutants to now be included in the air quality permits and to undergo the same permitting process as projects with significant increases in emissions of air pollutants. South Dakota's regulations as initially written were not intended to require these small sources to have to go through the same permitting process as projects with significant increases of air pollutants.

In July 2011, EPA promulgated a federal minor source review program in Indian country, which does not require a construction permit for new sources or modifications to existing sources if emissions are below the minor New Source Review threshold in Table 1 of 40 CFR § 49.153. The federal program allows existing sources with permits to administratively amend its existing permit to include these small sources of air pollutants.

To be consistent with EPA and to streamline the process for insignificant increases in air pollution, DENR is proposing to add "insignificant increase in allowable emissions" to the definition of "permit revision" in section 74:36:01(50) and an exception to the definition of "modification" in section 74:36:01:10, which will allow construction projects to move forward if the air pollution increase meets the definition of an "insignificant increase in allowable emissions." DENR is proposing to add a definition for, "insignificant increase in allowable emissions," derived from Table 1 in 40 CFR § 49.153. This process would still require a small source of air pollution to be covered by an air quality permit but would use a process similar to EPA's administrative amendment process. These sources have been and are expected to continue to be inconsequential to attainment or maintenance of the National Ambient Air Quality Standards.

The proposed changes to Chapter 74:36:01 may be observed in Appendix A.

3.0 Chapter 74:36:02 – Ambient Air Quality

Chapter 74:36:02 establishes the air quality goals and ambient air quality standards for South Dakota. EPA approved sections 74:36:02:01 through 74:36:02:05 of this chapter into South Dakota's SIP:

The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota's SIP and EPA's federal regulations as of July 1, 2014. The following sections in Chapter 74:36:02 involve this type of change:

1. 74:36:02:02;

2. 74:36:02:03;
3. 74:36:02:04; and
4. 74:36:02:05.

The proposed changes to Chapter 74:36:02 may be observed in Appendix A.

4.0 Chapter 74:36:03 – Air Quality Episodes

Chapter 74:36:03 identifies the contingency plan DENR will follow during an air pollution emergency episode. EPA approved sections 74:36:03:01 and 74:36:03:02 of this chapter into South Dakota’s SIP.

The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota’s SIP and EPA’s federal regulations as of July 1, 2014. These changes involve 74:36:03:01 and 74:36:03:02.

The proposed changes to Chapter 74:36:03 may be observed in Appendix A.

5.0 Chapter 74:36:04 – Operating Permits for Minor Sources

Chapter 74:36:04 is South Dakota’s minor air quality operating permit program. EPA approved sections 74:36:04:01 through 74:36:04:33 of this chapter into South Dakota’s SIP.

The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota’s SIP and EPA’s federal regulations as of July 1, 2014. This type of change involves section 74:36:04:04.

Section 74:36:04:03 lists emission units that are exempt from inclusion in a minor air quality operating permit. Emission units may not be exempted if federally enforceable limits have been included in the permit to avoid other permits. The revisions are being proposed to clarify that any unit that is applicable to a federal rule in Chapter 74:36:07 – New Source Performance Standards and Chapter 74:36:08 – National Emission Standards for Hazardous Air Pollutants may not be exempted from inclusion in the minor air quality operating permit. This will ensure that the business understands and complies with all of the federal requirements.

As discussed in Chapter 2.0, a definition for “insignificant increase in allowable emissions” is being proposed to account for all of the new federal standards covering small sources of air pollutants, to stream line the permitting actions for these small sources, and to be consistent with the federal permitting requirements. As such, the revisions are proposing to add section 74:36:04:21.01 which will identify procedures for processing an application for activities that are considered an “insignificant increase in allowable emissions.” This process will allow construction projects to move forward if the air pollution increase meets the definition of an “insignificant increase in allowable emissions.”

The proposed changes to Chapter 74:36:04 may be observed in Appendix A.

6.0 Chapter 74:36:05 – Operating Permits for Part 70 Sources

Chapter 74:36:05 is South Dakota’s Title V air quality operating permit program, which is also referred to as an Operating Permit for Part 70 Sources program. Title V air quality operating permit programs are not part of South Dakota’s SIP; however, EPA has approved South Dakota’s permit program. This program is located in section 74:35:05:01 through 74:35:05:52.

The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota’s SIP and EPA’s federal regulations as of July 1, 2014. These types of changes are in the following sections:

1. 74:36:05:04;
2. 74:36:05:06; and
3. 74:36:05:16.01.

Section 74:36:05:04.01 lists insignificant activities that are exempt from inclusion in a Title V air quality operating permit. Emission units may not be exempted if federally enforceable limits have been included in the permit to avoid other permits. DENR is proposing to clarify that any insignificant activity that is applicable to a federal rule in Chapter 74:36:07 – New Source Performance Standards and Chapter 74:36:08 – National Emission Standards for Hazardous Air Pollutants, be included in the Title V air quality operating permit. This proposal will ensure that businesses understand and comply with all of the federal requirements.

As discussed in Chapter 2.0, a definition for “insignificant increase in allowable emissions” is being proposed to account for all of the new federal standards covering small sources of air pollutants, to stream line the permitting actions for these small sources, and to be consistent with the federal permitting requirements. As such, the revisions are proposing to add section 74:36:05:39.01 which will identify procedures for processing an application for activities that are considered an “insignificant increase in allowable emissions.” This process will allow construction projects to move forward if the air pollution increase meets the definition of an “insignificant increase in allowable emissions.”

The proposed changes to Chapter 74:36:05 may be observed in Appendix A.

7.0 Chapter 74:36:07 – New Source Performance Standards

Chapter 74:36:07 includes all of the federal new source performance standards DENR has adopted by reference to maintain delegation of this program. However, the following three sections are not delegated but are included in South Dakota’s SIP:

1. 74:36:07:08 – Ash disposal requirements;
2. 74:36:07:29 – Operating requirements for wire reclamation furnaces; and
3. 74:36:07:30 – Monitoring requirements for wire reclamation furnaces.

The ash disposal requirements are for municipal waste combustors and reference Article 74:27, which are DENR's solid waste requirements. The sections on wire reclamation furnaces were developed to ensure existing wire reclamation furnaces were minimizing air emissions and conducting monitoring to ensure compliance. None of these sections are being revised at this time.

This chapter was last updated in June 2013, when the federal regulations promulgated as of July 1, 2012, were adopted by reference. The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota's rules and EPA's federal regulations as of July 1, 2014. There are 98 sections in this chapter. All but five are impacted by this proposed revision.

EPA has promulgated new standards since the last update to this chapter. The following section is proposed to be included in Chapter 74:36:07:

1. **74:36:07:94 – Standards of performance for crude oil and natural gas production, transmission and distribution**

This federal regulation establishes standards of performance for crude oil and natural gas production, transmission and distribution that commence construction, modification, or reconstruction after August 23, 2011. This standard is located in 40 CFR Part 60, subpart OOOO (July 1, 2014). DENR is proposing to adopt this standard by reference to ensure DENR has the proper regulations in place in case these federal rules are applicable in the future to the oil and natural gas industry in South Dakota.

The proposed changes to Chapter 74:36:07 may be observed in Appendix A.

8.0 Chapter 74:36:08 – National Emission Standards for Hazardous Air Pollutants

Chapter 74:36:08 includes all of the federal regulations DENR has adopted by reference to maintain delegation of federal standards applicable to hazardous air pollutants.

The revision process for chapter 74:36:08 is similar to the revision process for chapter 74:36:07. The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota's rules and EPA's federal regulations as of July 1, 2014. There are 138 sections in this chapter. All but the first section is being revised.

The proposed changes to Chapter 74:36:08 may be observed in Appendix A.

9.0 Chapter 74:36:09 – Prevention of Significant Deterioration

Chapter 74:36:09 is DENR's Prevention of Significant Deterioration preconstruction permit program for large sources in areas of the state that attain the federal National Ambient Air Quality Standards identified in Chapter 74:36:02. Facilities in the past that have been subject to this type of permit are the Big Stone II coal-fired power plant project in 2008 and the Hyperion oil refinery project in 2009. EPA approved the Prevention of Significant Deterioration preconstruction permit program in South Dakota's SIP. The Prevention of Significant Deterioration preconstruction permit program consists of sections 74:36:09:01 through 74:36:09:03 of this chapter.

The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota's SIP and EPA's federal regulations as of July 1, 2014.

These changes involve sections 74:36:09:02 and 74:36:09:03.

According to the Clean Air Act, once a pollutant is regulated under any part of the Act, (as was the case with greenhouse gas emissions after the motor vehicle regulations were finalized in March 2010) major new sources or major modifications are subject to the PSD program and Title V air quality operating permit program. Under the Clean Air Act, PSD and Title V air quality operating permits are required for all sources that emit a regulated air pollutant above 100 or 250 tons per year, depending on the source. This threshold, if applied to greenhouse gases, would greatly increase the number of facilities requiring a PSD review or Title V air quality operating permit. Based on administrative necessity, EPA increased these thresholds through the "Tailoring Rule."

On May 13, 2010, EPA issued the final version of the "Tailoring Rule" for greenhouse gas emissions. The major source thresholds for greenhouse gases are listed below:

1. New PSD source because of a criteria air pollutant, the major source threshold for greenhouse gases is 75,000 tons per year of carbon dioxide equivalent or more;
2. New PSD source if greenhouse gas emissions are 100,000 tons per year of carbon dioxide equivalent or more;
3. For an existing PSD source because of a criteria air pollutant, a major modification for greenhouse gases is an increase of 75,000 tons per year of carbon dioxide equivalent or more;
4. For an existing non-PSD source that has the potential to emit 100,000 tons per year of carbon dioxide equivalent emissions or more, a major modification for greenhouse gases is an increase of 75,000 tons per year of carbon dioxide equivalent or more; and
5. In addition to subsection (2) and (4), a specific greenhouse gas, without calculating the carbon dioxide equivalent, also needs to emit greater than 100 or 250 tons per year, whichever is applicable, to be regulated.

On June 24, 2014, the Supreme Court of the United States ruled that greenhouse gases may not be regulated under the PSD program unless the facility requires a PSD permit for the other regulated air pollutants. The Supreme Court ruling also changed the permitting requirements for

greenhouse gases in Chapter 74:36:05. Therefore, DENR is proposing to revise its greenhouse gas requirements for Chapter 74:36:05 and 74:36:09.

The proposed changes to Chapter 74:36:09 may be observed in Appendix A.

10.0 Chapter 74:36:10 – New Source Review

Chapter 74:36:10 is DENR’s New Source Review preconstruction permit program for large sources in areas of the state that are not attaining the federal National Ambient Air Quality Standards identified in Chapter 74:36:02. All of South Dakota is in attainment with the federal standards; therefore, there are no facilities that require a preconstruction permit under this program. EPA approved sections 74:36:10:01 through 74:36:10:08 of this chapter into South Dakota’s SIP.

The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota’s SIP and EPA’s federal regulations as of July 1, 2014. These changes involve the following sections:

1. 74:36:10:02;
2. 74:36:10:03.01;
3. 74:36:10:05;
4. 74:36:10:07; and
5. 74:36:10:08.

On December 24, 2003, several definitions for new source review were stayed indefinitely by a court order. On March 30, 2011, EPA extended the stay of the “Fugitive Emissions Rule” under the new source review program. The extension clarified the stay and revisions of specific paragraphs in the new source review program affected by the Fugitive Emissions Rule. Changes are proposed to revise South Dakota’s SIP to remove these references. These changes involve section 74:36:10:02.

On January 22, 2013, the United States Court of Appeals for the District of Columbia Circuit vacated the significant impact levels for particulate matter less than 2.5 microns (PM2.5) in the new source review program. Changes are proposed to remove the significant impact levels for PM2.5 from South Dakota’s SIP. These changes involve section 74:36:10:06.

The proposed changes to Chapter 74:36:10 may be observed in Appendix A.

11.0 Chapter 74:36:11 – Performance Testing

Chapter 74:36:11 identifies the performance testing requirements used by permitted facilities to demonstrate compliance with permit limits. EPA approved sections 74:36:11:01 through 74:36:11:04 of this chapter into South Dakota’s SIP.

The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota's SIP and EPA's federal regulations as of July 1, 2014. These changes involve section 74:36:11:01.

The proposed changes to Chapter 74:36:11 may be observed in Appendix A.

12.0 Chapter 74:36:12 – Control of Visible Emissions

Chapter 74:36:12 identifies visible emission limits for units that emit air pollution. It also identifies exceptions to the limits for certain instances such as brief periods during soot blowing, startup, shutdown, and malfunctions. EPA approved sections 74:36:12:01 through 74:36:12:03 of this chapter into South Dakota's SIP.

The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota's SIP and EPA's federal regulations as of July 1, 2014. These changes involve sections 74:36:12:01 and 74:36:12:03.

The proposed changes to Chapter 74:36:12 may be observed in Appendix A.

13.0 Chapter 74:36:13 – Continuous Emission Monitoring Systems

Chapter 74:36:13 identifies the continuous emission monitoring requirements for sources required to install continuous monitoring equipment by the Secretary. EPA approved sections 74:36:13:01 through 74:36:13:07 of this chapter into South Dakota's SIP.

Section 74:36:13:08 is not part of South Dakota's SIP but was approved by EPA as part of South Dakota's Title V air quality operating permitting program noted in Chapter 74:36:05.

The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota's SIP, approved Title V permitting Program and EPA's federal regulations as of July 1, 2014. These changes involve the following sections:

1. 74:36:13:02;
2. 74:36:13:03;
3. 74:36:13:04;
4. 74:36:13:06;
5. 74:36:13:07; and
6. 74:36:13:08.

The proposed changes to Chapter 74:36:13 may be observed in Appendix A.

14.0 Chapter 74:36:16 – Acid Rain Program

South Dakota's Acid Rain Program is similar to Chapter 74:36:07 – New source performance standards and Chapter 74:36:08 – National emission standards for hazardous air pollutants. This chapter is delegated to South Dakota by EPA.

The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota's SIP and EPA's federal regulations as of July 1, 2014. These changes involve the following sections:

1. 74:36:16:01;
2. 74:36:16:02;
3. 74:36:16:04; and
4. 74:36:16:05.

The proposed changes to Chapter 74:36:16 may be observed in Appendix A.

15.0 Chapter 74:36:18 – Regulations for State Facilities in the Rapid City Area

Chapter 74:36:18 is part of South Dakota's SIP and EPA approved sections 74:36:18:01 through 74:36:18:12 of this chapter into South Dakota's SIP.

The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota's SIP and EPA's federal regulations as of July 1, 2014. These changes involve section 74:36:18:10.

The proposed changes to Chapter 74:36:18 may be observed in Appendix A.

16.0 Chapter 74:36:20 – Construction Permits for New Sources or Modifications

Chapter 74:36:20 requires an air quality construction permit for new businesses/facilities and existing businesses/facilities that modify their operations that do not meet the requirements for obtaining a preconstruction permit in Chapters 74:36:09 and 74:36:10. DENR submitted Chapter 74:36:20 to EPA for inclusion in South Dakota's SIP. EPA approved Chapter 74:36:20 in South Dakota's SIP on June 27, 2014, except for the phrase, "unless it meets the requirements in section 74:36:20:02.01," and all of section 74:36:20:02.01. Section 74:36:20:02.01 allows small projects to start construction prior to receiving a construction permit but does not allow them to start operation until the construction permit has been issued. The intention of the language was to allow construction of small sources that would not impact South Dakota's ability to achieve and/or maintain the National Ambient Air Quality Standards because of South Dakota's relative short construction season due to ground freezing during our winter season or other inclement weather that could potentially and unnecessarily delay the construction project.

Changes are proposed to resolve the issue with EPA's disapproval of section 74:36:20:02.01 in South Dakota's SIP. Currently, EPA allows the construction of concrete foundations, below-ground plumbing, ductwork, or other infrastructure and/or excavation work prior to the issuance of the construction permit. DENR is proposing to limit what can be constructed prior to the issuance of the construction permit to what EPA has allowed. After completion of these pre-permit activities there should be no anticipated increases in emissions of regulated air pollutants associated with them. The proposed changes would also minimize potential delays in the construction of an entire project due to South Dakota's limited construction season. These proposed changes involve sections 74:36:20:02 and 74:36:20:02.01.

The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota's SIP and EPA's federal regulations as of July 1, 2014. These proposed changes involve section 74:36:20:05.

As discussed in Chapter 2.0, a definition for "insignificant increase in allowable emissions" is being proposed to account for all of the new federal standards covering small sources of air pollutants, to stream line the permitting actions for these small sources, and to be consistent with the federal permitting requirements. As such, the revisions are proposing to add section 74:36:20:05.01 which will identify procedures for processing an application for activities that are considered an "insignificant increase in allowable emissions". This process will allow construction projects to move forward if the air pollution increase meets the definition of an "insignificant increase in allowable emissions".

The proposed changes to Chapter 74:36:20 may be observed in Appendix A.

17.0 Chapter 74:36:21 – Regional Haze Program

Chapter 74:36:21 contains the requirements DENR agreed to as part of South Dakota's Regional Haze Program. EPA approved sections 74:36:21:01 through 74:36:21:12 of this chapter into South Dakota's SIP.

The reference date for the federal regulation is proposed to be updated to the most current version of the federal reference of July 1, 2014. This revision will update any minor inconsistency between South Dakota's SIP and EPA's federal regulations as of July 1, 2014. These proposed changes involve sections 74:36:21:02; 74:36:21:04; 74:36:21:05; and 74:36:21:09.

The proposed changes to Chapter 74:36:21 may be observed in Appendix A.

- (1) One or more incinerators of less than 100 pounds per hour combined burning capacity that combust municipal or household waste;
- (2) A mobile internal combustion engine, including those in autos, trucks, tractors, airplanes, locomotives, and boats;
- (3) Laboratory equipment used exclusively for chemical or physical analysis;

(4) A unit that has a heat input capability of not more than 3,500,000 Btus per hour, except for units fueled with wood or coal;

(5) An air conditioning or ventilating system not designed to remove air pollutants from equipment;

(6) Routine housekeeping or plant upkeep activities such as painting buildings, retarring roofs, or paving parking lots; and

(7) A unit that has the potential to emit two tons or less per year of any criteria pollutant before the application of control equipment. However, the criteria pollutant emissions from the unit must be included in determining whether the source is a minor source.

74:36:04:04. Standard for issuance of a minor source operating permit. An operating permit for a source or permit revision may be issued only if it has been shown that the operation of the source or permit revision will not prevent or interfere with the attainment or maintenance of an applicable national ambient air quality standard. Compliance with this requirement as determined by air pollution dispersion modeling is not affected by stack height that exceeds good engineering practice or by any other dispersion technique as defined in 40 C.F.R. § 51.100 (~~July 1, 2012~~ July 1, 2014). Each source must comply with emission limits and other requirements of the act and the Clean Air Act. The minor source operating permit must include reasonable conditions, including adherence to plans and specifications, to assure compliance with the act, the Clean Air Act, and any other conditions justified under SDCL 34A-1-19.

- (2) The type of operation;
- (3) The facility and mailing address;
- (4) The date the operating permit was granted and on which it will expire;
- (5) A number for administrative reference;
- (6) The name of a designated person or officer responsible for the source's operation;

(7) A statement granting an operating permit by the board or secretary and any conditions that the board or secretary may impose to ensure compliance with the act and the Clean Air Act;

(8) Emission limits and standards, including operational requirements and limits for all regulated emission units, necessary to assure compliance with applicable requirements of the act and the Clean Air Act and including the following:

(a) The reference of authority for each term or condition;

(b) The applicable requirements from the Clean Air Act and from Title IV requirements of the Clean Air Act, reviewing both requirements and distinguishing which is more stringent and incorporating both into the permit; and

(c) If an alternative emission limit is approved in the state implementation plan (SIP), provisions to ensure that the alternative emission limit in the permit issuance, renewal, or permit modification process has been demonstrated to be equivalent to the applicable emission limit in the state implementation plan and is quantifiable, accountable, enforceable, and based on replicable procedures;

(9) Monitoring and related record keeping and reporting requirements, consisting of at least the following:

(a) All emissions monitoring and analysis procedures, alternative approved methods or test methods required under the applicable requirements, including procedures and methods in § 504(b) or 114(a)(3) of the Clean Air Act;

(b) If the applicable requirement does not require periodic testing or instrumental or noninstrumental monitoring, periodic monitoring sufficient to yield reliable data from the relevant time period that are representative of the source's compliance with the permit. Such monitoring requirements must assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement;

(c) As necessary, documentation of the use, maintenance, and if appropriate, installation of monitoring equipment or methods;

(d) Documentation of the following:

- (i) The date, place as defined in the permit, and time of sampling or measurements;

(f) Requirements for retention of monitoring records and all supporting documentation for at least five years from the date of the monitoring sample, measurement, report, or application; and

(10) If applicable, a condition prohibiting emissions exceeding any allowances that the source lawfully holds, exceedances of applicable emission rates, and the use of any allowance prior to the year for which it was allocated under the Title IV program of the Clean Air Act;

(11) A severability clause asserting the continued validity of permit requirements if any portions of the permit are challenged;

(12) Provisions stating the following:

(a) The permittee must comply with all conditions of the permit. Any permit noncompliance constitutes a violation and is grounds for enforcement action, permit termination, revocation and reissuance, permit revision, or denial of a permit renewal application;

(b) A permittee in an enforcement action may not use the defense that it would have been necessary to cease or reduce the permitted activity in order to maintain compliance;

(c) The permit may be revised, revoked and reissued, reopened, or terminated for cause. The filing of a request by the permittee for a permit revision, revocation and reissuance, or termination or of a notification of planned changes or anticipated noncompliance does not stay any permit condition;

(d) The permit does not convey property rights of any sort or any exclusive privilege;
and

(e) The permittee must provide any information, including records, requested in writing by the department to determine whether cause exists for revising, revoking and reissuing, reopening, or terminating the permit or to determine compliance;

the source, contemporaneously with making a change from one operating scenario to another, to record in a log at the permitted facility a record of the scenario under which it is operating and must ensure that the terms and conditions of each such alternative scenario meet all requirements of the Clean Air Act;

(14) Compliance requirements that contain the following:

(a) A compliance certification and testing, monitoring, reporting, and recordkeeping requirements sufficient to assure compliance with the terms and conditions of the permit. All documents, including reports, required by the permit must be certified by a responsible official consistent with subdivision 74:36:05:12(17). The compliance certification must be submitted annually from the date of permit issuance to the department and EPA;

(b) Inspection and entry requirements that require the permittee to allow the department or an authorized representative to perform the following:

(1) Enter upon the permittee's premises where a Part 70 source is located or emissions-related activity is conducted or where records must be kept under the conditions of the permit;

(2) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;

(3) Inspect at reasonable times any facilities, equipment, practices, or operations regulated or required under the permit; and

For the purposes of this chapter, the definitions for new source review are those in 40 C.F.R. § 51.165(a)(1), except for the second sentence of 40 C.F.R. § 51.165(a)(1)(v)(C)(1), and 40 C.F.R. § 51.165(a)(1)(v)(G), (a)(1)(vi)(C)(3), (a)(1)(xliii), (a)(1)(xliv), (a)(1)(xlv), and (a)(1)(xlvi) (July 1, 2012 July 1, 2014).

For the purposes of this chapter, the term, Act, means the Clean Air Act.

For the purposes of this section, the term, reviewing authority, means the secretary.

Law Implemented: SDCL 34A-1-6.

74:36:10:03.01. New source review preconstruction permit required. New major stationary sources or major modifications to existing major sources must obtain a preconstruction permit before beginning actual construction if they are located in the following areas:

(1) An attainment or unclassified area if the source would cause or contribute to a violation of any national ambient air quality standard; or

(2) An area designated nonattainment for any national ambient air quality standard if the source is major for the pollutant for which the area is designated nonattainment.

Except as provided by a plant-wide applicability limit, a proposed project is considered a major modification to an existing major source if the proposed project meets the criteria in 40 C.F.R. § 51.165(a)(2)(ii)(A) to (F), inclusive, (~~July 1, 2012~~ July 1, 2014).

Source: 30 SDR 26, effective September 1, 2003; 31 SDR 101, effective January 2, 2005; 36 SDR 207, effective June 28, 2010; 39 SDR 219, effective June 25, 2013.

General Authority: SDCL 34A-1-6, 34A-1-21.

Law Implemented: SDCL 34A-1-6, 34A-1-21.

Note: The procedural requirements for obtaining a preconstruction permit under the new source review program are similar to the procedural requirements for a Part 70 source, such as a timely and complete application, completeness review, statement of basis, public participation, and departmental recommendation, as outlined in §§ 74:36:05:08 to 74:36:05:20.01, inclusive.

74:36:10:05. New source review preconstruction permit. A new source review preconstruction permit must satisfy the following criteria before beginning actual construction:

(1) All requirements for new source performance standards in chapter 74:36:07 that apply to the facility;

(2) Compliance with the lowest achievable emission rate (LAER);

(3) Certification of compliance that all other major sources, major modifications, or reconstructed facilities that are owned, operated, or controlled by the applicant either in whole or in part elsewhere in the state are in compliance with all applicable emission limitations and standards; and

(4) The total tonnage of increased emissions, in tons per year, resulting from a major modification that must be offset shall be determined by summing the difference between the allowable emissions after the modification and the actual emissions before the modification for each emissions unit. Emissions offsets are determined in accordance with § 74:36:10:07.

The owner or operator may apply for a plant-wide applicability limit. The procedures for a plant-wide allowable limit are those in 40 C.F.R. § 51.165(f)(1) to (f)(15), inclusive, (~~July 1, 2012~~ July 1, 2014).

Approval to construct does not relieve an owner or operator of the responsibility to comply fully with applicable provisions of this article or the Clean Air Act and any other requirements under local, state, or federal law.

Submission of preconstruction monitored or projected ambient air quality data, or both, from the proposed source must accompany the permit application. In addition, air quality

dispersion modeling and meteorological data for the prescribed area may be required by the department. Costs of these requirements must be absorbed by the proposed source.

74:36:10:06. Causing or contributing to a violation of any national ambient air quality standard. This section applies to any major stationary source or major modification to an existing major source that is located in an attainment or unclassifiable area that may cause or contribute to violation of a national ambient air quality standard. A major stationary source or major modification to an existing major source is considered to cause or contribute to a violation of a national ambient air quality standard if the source or modification would, at a minimum, exceed the following significance levels at any locality that does not or would not meet the applicable national standard:

POLLUTANT AND SIGNIFICANT LEVELS

	Annual	24	Averaging time (hours)		
			8	3	1
(1) SO ₂ :	1.0 ug/m ³	5 ug/m ³	-	25 ug/m ³	-
(2) PM ₁₀ :	1.0 ug/m ³	5 ug/m ³	-	-	-
(3) PM_{2.5}	0.3 ug/m³	1.2 ug/m³	-	-	-
(4) (3) NO ₂ :	1.0 ug/m ³	-	-	-	-
(5) (4) CO	-	-	0.5 mg/m ³	-	2 mg/m ³

The owner or operator of a new major stationary source or major modification to an existing major source may reduce the impact of its emissions on air quality by obtaining emission offsets to compensate for its adverse ambient impact where the new major source or major modification to an existing major source would otherwise cause or contribute to a violation of the national ambient air quality standard. The procedures for determining credit for emission offsets are those in § 74:36:10:07.

Source: 17 SDR 170, effective May 13, 1991; transferred from § 74:26:01:16:02, 19 SDR 157, effective April 22, 1993; 30 SDR 26, effective September 1, 2003; 39 SDR 219, effective June 25, 2013.

General Authority: SDCL 34A-1-6.

Law Implemented: SDCL 34A-1-6.

74:36:10:07. Determining credit for emission offsets. The baseline for determining credit for emission offsets is the emission limit in effect at the time the application to construct is filed, except that the offset baseline is the actual emission of the unit from which offset credit is obtained if the demonstration of reasonable further progress and attainment of ambient air quality standards is based upon the actual emission of sources located within a designated nonattainment area; or if there is no applicable emission limit.

In determining credit for emission offsets the following criteria shall be met:

(1) All offsets must be for the same regulated NSR pollutant, result in a net positive air quality benefit in the affected area, and be approved by the department before issuance of the permit, even though they need not be in effect until the source commences operation. The offset ratio of total actual emissions reductions to the emissions increase shall be at least 1 to 1 unless an alternative ratio is provided in accordance with the offset requirements in 40 C.F.R. § 51.165(a)(9)(ii) through 51.165(a)(9)(iv) (~~July 1, 2012~~ July 1, 2014);

(2) External offsets or those emission limitations from sources not owned, operated, or controlled by an applicant for a permit shall be made through a revision of the permit conditions of the participating source or sources. At no time may the baseline be exceeded;

(3) The permissible location of offsetting emissions shall be conducted in accordance with 40 C.F.R., Part 51, Appendix S, section IV.D (~~July 1, 2012~~ July 1, 2014);

(4) For an existing fuel combustion unit, credit shall be based on the emission limit for the type of fuel being burned at the time the application to construct is filed. If the existing source agrees to switch to a cleaner fuel at some future date, emission offset credits based on the allowable or actual emissions for the fuels involved may be allowed only if permit conditions specify an alternative control measure that would achieve the same degree of emission reduction if the source switched back to the dirtier fuel at some later date;

(5) Emission reductions achieved by shutting down an existing unit or curtailing production or operating hours below baseline levels may be credited if the reductions are permanent, quantifiable, federally enforceable, and the area has a federally-approved attainment plan. In addition, the shutdown or curtailed production must occur after August 7, 1977, or less than one year before the date of submitting the permit application, whichever is earlier. Emission reductions may be credited in the absence of a federally-approved attainment plan if the shutdown or curtailment occurred on or after the date the application is filed for a new unit or if the applicant can establish that the proposed new unit is a replacement for the shutdown or curtailed unit, and the shutdown or curtailment occurred after August 7, 1977, or less than one year before the date of submitting the permit application, whichever is earlier;

(6) Except as set forth in 40 C.F.R. § 51.165(a)(3)(ii)(D) (~~July 1, 2012~~ July 1, 2014), emission offset credit may not be allowed for replacing one hydrocarbon compound with another of lesser reactivity;

(7) Credit for emissions reduction may be claimed to the extent that the department has not relied on it in issuing a permit or in its demonstration of attainment or reasonable further progress;

(8) If the emissions limit allows greater emissions than the potential to emit of the unit, the emission offset credit is allowed only for the control below the potential to emit of the unit; and

(9) All emission reductions claimed as offset credit must be federally enforceable.

74:36:20:05. Standard for issuance of construction permit. A construction permit for a new source or modification to an existing source may be issued only if it has been shown that the operation of the new source or modification to an existing source will not prevent or interfere with the attainment or maintenance of an applicable national ambient air quality standard. Compliance with this requirement as determined by air pollution dispersion modeling shall be based on modeling performed in accordance with 40 C.F.R. Part 51, Appendix W (~~July 1, 2012~~ [July 1, 2014](#)) and is not affected by stack height that exceeds good engineering practice or by any other dispersion technique as defined in 40 C.F.R. § 51.100 (~~July 1, 2012~~ [July 1, 2014](#)). Each new source or modification to an existing source must comply with emission limits and other requirements of the act and the Clean Air Act. 74:36:21:02. Definitions. Unless otherwise specified, the terms used in this chapter mean:

(1) "Adverse impact on visibility," visibility impairment that interferes with the management, protection, preservation, or enjoyment of the visitor's visual experience of the mandatory Class I federal area. Adverse impact on visibility shall be based on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency, and time of visibility impairment, and how these factors correlate with times of visitor use of a mandatory Class I federal area and the frequency and timing of natural conditions that reduce visibility;

(2) "BART," best available retrofit technology;

(3) "Best available retrofit technology" an emission limitation based on the degree of reduction achievable through the application of the best system of continuous emission reduction

for each pollutant that is emitted by an existing stationary facility. The emission limitation must be established, on a case-by-case basis, taking into consideration the technology available, the costs of compliance, the energy and nonair quality environmental impacts of compliance, any pollution control equipment in use or in existence at the source, the remaining useful life of the source, and the degree of improvement in visibility that may reasonable be anticipated to result from the use of such technology;

(4) "BART-eligible source," an existing stationary facility;

(5) "Coal-fired power plant," any person, corporation, limited liability company, association, company, partnership, political subdivision, municipality, rural electric cooperative, consumers power district, or any group or combination acting as a unit, owning or holding under lease, or otherwise real property used, or intended for use, for the conversion of coal into electric power;

(6) "Contribute to adverse impact on visibility," a change in visibility impairment in a mandatory Class I federal area of five-tenths deciviews or more, based on a 24-hour average, above the average natural visibility baseline. A source exceeds the threshold if the 98th percentile (eighth highest value) of the modeling results, based on one year of the three years of meteorological data modeled, equals or exceeds five-tenths deciviews;

(7) "Major source," as defined in § 74:36:01:08(2) and (3);

(8) "Mandatory Class I federal area," any area identified in 40 C.F.R. § 81, Subpart D (~~July 1, 2012~~ July 1, 2014);

(9) "Visibility impairment," any human perceptible change in visibility such as light extinction, visual range, contrast, coloration, from that which would have existed under natural conditions;

(10) "30-day rolling average," expressed as pounds per million Btus and pounds per hour and calculated in accordance with the following procedures:

(a) Sum the total pounds of pollutant in question emitted from a unit during an operating day and the previous 29 operating days;

(b) Sum the total heat input to the unit in million Btus during the operating day and the previous 29 operating days;

(c) Sum the total hours the unit operated in hours during the day and the previous 29 operating days;

(d) For pounds per million Btus, divide the total number of pounds of the pollutant emitted during the 30-day operating days by the total heat input during the 30-day operating days;

(e) For pounds per hour, divide the total number of pounds of the pollutant emitted during the 30-day operating days by the total hours operated during the 30-day operating days.

A new 30-day rolling average shall be calculated for each new operating day. Each 30-day rolling average shall represent all emissions, including emissions that occur during periods of startup, shut down, and malfunction; and

(11) "Operating day," a 24-hour period between 12 midnight and the following midnight during which any fuel is combusted at any time in the unit. It is not necessary for fuel to be combusted the entire 24-hour period.

74:36:21:04. Visibility impact analysis. The owner or operator of a new major source or modification to a major source shall demonstrate to the department that the potential to emit from the new major source or modification to a major source will not contribute to adverse impact on visibility in any mandatory Class I federal area. The demonstration shall be based on visibility models approved in 40 C.F.R. § 51, Subpart W (~~July 1, 2012~~ [July 1, 2014](#)).

74:36:21:05. BART determination. The owner or operator of a BART-eligible source that emits any air pollutant which may reasonably be anticipated to contribute to adverse impact on visibility in any mandatory Class I federal area shall submit a BART determination. The BART determination shall follow the procedures outlined in 40 C.F.R. § 51, Subpart Y (~~July 1, 2012~~ [July 1, 2014](#)) and must be based on an analysis of the best system of continuous emission control technology available and associated emission reductions achievable for each BART-eligible source. In this analysis, the BART determination must take into consideration the technology available, the costs of compliance, the energy and nonair quality environmental impacts of compliance, any pollution control equipment in use at the source, the remaining useful life of the source, and the degree of improvement in visibility that may reasonably be anticipated to result from the use of such technology. The BART determination shall be submitted within nine months after being notified by the department that the existing stationary source is reasonably anticipated to contribute to adverse impact on visibility in any mandatory Class I federal area.
