RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. I am concerned about this application because I am interested in water quality, land use, and wildlife in western South Dakota. I oppose this application.

I request that the deadline for filing petitions to initiate a Contested Case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation, as the notice was published during the holiday.

Please keep me informed of all proceedings and documents related to this application.

Thank you!

Sincerely,

Adrian M. Forrette III

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. I am concerned about this application because I am interested in water quality, land use, soil preservation, and wildlife in western South Dakota. I oppose this application because I believe the proposed ground water discharge would harm wildlife, create runoff, and pollute soils and the Cheyenne River. I am asking you to deny the permit application.

In-situ leach mining releases toxic materials from their bound condition underground, and it is impossible to avoid releasing some of these pollutants into the environment. The proposed water discharge site is dangerously close to a creek that empties into Angostura Reservoir. I am concerned about the inevitable degradation of water quality in that reservoir.

Another serious concern is the possibility of grass fires in the discharge area. A fire could lift toxic pollutants - including radioactive materials - into the air where they could blow anywhere. Although grass fires are relatively common in Western South Dakota, the application does not address this very real risk.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

Sincerely,

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

January 16, 2013

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter. I am concerned about this application because I am interested in water quality, land use, and wildlife in western South Dakota. I oppose this application because I believe the proposed ground water discharge would harm wildlife, create runoff, and further pollute the Cheyenne River, and I want the permit application to be denied.

I have lived and worked on the Pine Ridge Reservation for 18 months and am aware of some of the damage already done by previous uranium mining ventures.

I request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation, as the Notice was published during the holidays.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

Sincerely,

Anne Fields

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

We are requesting that a contested case be initiated in the above matter and that we be admitted as intervenors in the above application. We are ranchers and organic crop producers, and we irrigate our land. We are very concerned about this application. Water is critical to our health and to the health and well-being of our livestock and our livelihood. From what we have read, we understand that 30% of the water to be used by Powertech will be contaminated with heavy metals and radiation. Discharge of such water will threaten our land use and our critical water supply. In addition, wildlife in western South Dakota will be negatively impacted should Powertech be granted a permit to discharge such water.

We oppose this application and ask that in the interest of farmers, ranchers, and all the residents of western South Dakota that the permit application be denied.

Please keep us informed of all proceedings and documents related to this application.

Thank you.

SD DENR Recommends Approval Of Powertech Plan
by Associated Press

December 17, 2012 1:25 PM

The South Dakota Department of Environment and Natural Resources is recommending conditional approval by Powertech Inc. for a ground water discharge plan connected to the company's proposed injection-well uranium mine near Edgemont.

Powertech Uranium Corp. plans to pump groundwater into the underground ore deposits near Edgemont to dissolve the uranium. The water would be pumped to the surface, where the uranium would be extracted. The company estimates the mine would produce 1 million pounds of uranium oxide a year for 20 years.

Petitions to intervene on the department's recommendation must be filed with the department's Ground Water Quality Program and postmarked by Jan. 18. If petitioned, a hearing on the department's recommendation will be heard before the state Water Management Board sometime early in 2013.

74:50:02:02. Petition to initiate contested case. A person contesting a recommendation of the department concerning a permit application or requesting an order from the board or secretary shall file a petition for a contested case hearing. The petition shall be filed with the department and shall contain the following:

(1) A statement of the petitioner's interest in the involved matter;

(2) A statement of the recommendation contested, if any, and the relief and decision requested from the board; See Above.

(3) A statement alleging the relevant facts and issues known to the petitioner, upon which the petitioner bases the contest or request to the board;

(4) A statement of the legal authority and jurisdiction under which the hearing would be held, if known; See Herein.

(5) A reference to the particular statutes and rules involved, if known; and

(6) The signature of the petitioner or the petitioner's attorney.

The petitioner shall serve a copy of the petition upon all known persons affected by the petitioner's request who shall be considered parties to the proceeding.

Source: 14 SDR 86, effective December 24, 1987; transferred from § 74:03:13:01, July 1, 1996.

As concerned citizens, we ask our officials to stop all uranium mining until it can be proven that mining will not damage our water or reduce the amount of water available to our families, ranches, businesses, and communities.

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. I am concerned about this application because I am interested in water quality, land use, and wildlife in western South Dakota. I oppose this application.

I request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation, as the Notice was published during the holidays.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

Sincerely,

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. I am concerned about this application because I am interested in water quality, land use, and wildlife in western South Dakota. I oppose this application because I believe the proposed ground water discharge would harm wildlife, create runoff, and pollute the Cheyenne River, and I want the permit application to be denied.

I request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation, as the Notice was published during the holidays.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

Sincerely,

Carol Merwin

The Clean Water Alliance, an organization of South Dakota and Lakota citizens, by and through its undersigned counsel, hereby objects to the above-described application for a ground water discharge plan for wastewater filed on behalf of Powertech. This objection is based upon the grounds and for the reason that the granting of such permits will adversely effect the future surface and subsurface water rights of South Dakota and Lakota citizens and their ability to use our water resources for domestic, commercial, and other uses.

Some of the issues of concern raised by these permits include:

1. The proposal for land application of treated wastewater at Powertech’s Dewey-Burdock uranium mining and milling project would spray heavy metals left in mine waste on the surface which potentially threatens to contaminate surface water supplies and would harm wildlife, create runoff and pollute the Cheyenne River. In other sites where this disposal technic had been used, there has been a build-up of toxic materials, including selenium, at other sites.

2. The proposal for land application of treated mine waste would potentially harm ground waster supplies due to the fractured nature of the strata in the proposed project area and prevalence of uncapped or improperly capped exploration wells allowing for surface...
water to enter ground water resources.

3. The CWA objects to Powertech’s proposed groundwater discharge application and respectfully submits that due to the real dangers and history of contamination of water resources by ISL mining, the Application is not in the public interest.

Dated this 16th day of January, 2013.

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. I have concerns about this application to include runoff, threat to the Cheyenne River water, potential for seepage into ground water and the impact on wildlife that I feel are not being fully addressed by Powertech. I also request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation, as the Notice was published during the holidays.

Thank you.

Re: Petition contesting the DENR’s approval of Powertech, Inc.’s Ground Water Discharge Plan

Dear Mr. Hicks;

(1) Defenders of the Black Hills objects to the approval of Powertech Inc.’s Ground Water Discharge Plan for the following reasons:

A.) There is no mention or discussion of the impact the pivot spraying of radioactive waste water will have on Historic and Archaeological resources.

B.) The background radioactive level in the area is already high enough from the more than 100 abandoned open-pit uranium mines without increasing those levels with the spraying radioactive wastewater onto the land.

C.) Evaporation during the spraying of the radioactive wastewater will be carried to other areas spreading the radioactive waste to a much wider area than anticipated, especially as this is a very arid area and not suited to the amount of moisture from pivot spraying.

D.) As this is an arid area, whose natural foliage and soil is suited for an arid area, there amount of runoff will exceed the amount anticipated to soak into the soil causing increased radioactive runoff to travel into the creeks and ultimately the Cheyenne River.

E.) The radioactive spraying will have an adverse affect on the threatened and endangered species living or migrating through the Dewey-Burdock area.

(2) We recommend that this project not be granted approval.

(3) Our concerns arise from information in the record kept by SD DENR on their website; through studies by the SD School of Mines and Technology; and through Powertech’s application to the Nuclear Regulatory Commission.

(4) We understand this hearing is according to SD Administrative Regulation 74:50:02:02, and the regulations governing the SD Department of Environment and Natural Resources.

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. Powertech’s application makes me very concerned because I have heard a lot about the negative effects from spraying of the wastewater from ISL uranium mining. I oppose this application because I believe the proposed ground water discharge would harm wildlife, create runoff, and pollute the Cheyenne River, and I want the permit application to be denied. Also the area where the waste water will be sprayed is high risk for prairie fires. As the various toxic contaminants carried by the water settles into the grass and ground, fires could create potential airborne contamination.

I also request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for this Friday, January 18, 2013, be extended until at least February 1, 2013, to allow full public participation, since the Notice was published during the holidays.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

Sincerely,

Dear Mr. Hicks,

I am writing to ask to be included as an intervenor in regard to the proposed plan to mine uranium near Edgemont. I am opposed to the application for this right by Powertech because of my concern for the water quality, the harm to the land and what it will do to the wild life in that area. Please extend the deadline so that the public will be able to participate and make their voices heard.

Thank you for your consideration.

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. My partner and I are young farmers in Western SD and I am greatly concerned about this application because of its potential negative consequences for water quality and land use. It is very difficult for young people to get started in agriculture. We do not need to add questionable water and other contamination to the list of challenges. I oppose this application because I believe the proposed ground water discharge would create undesirable runoff, pollute the Cheyenne River, and make it harder for those trying to make a living on the land. In addition I am opposed to this permit because of its danger to human health and safety as well as potential harm to wildlife. I want the permit application to be denied.

Please keep me informed of all proceedings and documents related to this application.

Thank you for your time and attention.

Sincerely,

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. I am concerned about this application because I am interested in water quality, land use, and wildlife in western South Dakota. I oppose this application.

I request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation, as the Notice was published during the holidays.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

Sincerely,

As do not allow this! My home state of Colo is already permanently polluted from uranium (no wells have readings to pre-mine state). The air, water, soil will never be the same. Theres increased cancers + illness. Do you want this in your back yard? say "no" to this for the sake of doing what is right.

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervener in the above application. I am concerned about this application because I am interested in water quality, land use, and wildlife in western South Dakota. My major concerns are:

- Prairie fires: The area where the waste water will be sprayed is high risk for prairie fires. As the various toxic contaminants carried by the water settles into the grass and ground, fires would create potential airborne contamination.
- Cheyenne River & Angostura Reservoir: runoff from the land sprayed will flow into the Cheyenne River, which will then be carried to our Angostura Reservoir.

I oppose this application because I believe the proposed ground water discharge would harm wildlife, create runoff, and pollute the Cheyenne River, and I want the permit application to be denied.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

Sincerely,

Juli Ames-Curtis

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. I am concerned about this application because I am interested in water quality, land use, and wildlife in western South Dakota. I oppose this application because I believe the proposed ground water discharge would harm wildlife, create runoff, and pollute the Cheyenne River, and I want the permit application to be denied. We are at a point in time where water is becoming a very fragile resource. I believe that in this area there are many possible cracks and caverns, so it would be very possible for the runoff from the water discharge to get into the underground water systems. This would not be very good for anyone depending on this water.

I request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation, as the Notice was published during the holidays.

Please keep me informed of all proceedings and documents related to this application.

Dear Mr. Hicks,

I am writing to request that you initiate a case contesting Powertech Uranium's application for a ground water discharge permit.

I would like to be admitted as an intervener in the case. I am concerned that the proposed ground water discharge would be harmful to wildlife, pollute streams, the Cheyenne River, Angostura Reservoir and area aquifers.

Please inform me of any proceedings and please mail any pertinent documents to my address, listed below.

Thank you for your kind attention to my request.

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. I am concerned about this application because I am interested in water quality, land use, and wildlife in western South Dakota. I oppose this application.

I request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation, as the Notice was published during the holidays.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium  

Dear Mr. Hicks:  

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. Powertech's application makes me very concerned because I have heard a lot about the negative effects from spraying of the wastewater from ISL uranium mining. I oppose this application because I believe the proposed ground water discharge would harm wildlife, create runoff, and pollute the Cheyenne River, and I want the permit application to be denied.  

I also request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for this Friday, January 18, 2013, be extended until at least February 1, 2013, to allow full public participation, since the Notice was published during the holidays.  

Please keep me informed of all proceedings and documents related to this application.  

Thank you.

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Good day to you Mr. Hicks,

I've been following the reopening of uranium mining in South Dakota for about 10 years, and I have to say Powertech has not presented a very convincing argument for same. In fact they haven't addressed radioactive issues that affect human health, agriculture, clean air and water, to say nothing of the invasion of sensitive cultural and heritage sites.

And now they want to pitch a story to you, other regulatory bodies, and the public at large that it's safe to spray radioactive wastewater on 1K acres of land as part of the Dewey Burdock project.

There are hundreds of abandoned uranium mines in South Dakota, abandoned by such companies as Powertech, who promise safe practices and high paying jobs, economic development and hazardous waste cleanup. All of which have proven to be untrue. Oh, sure, there are short term benefits in a boom, but in hindsight, what about those hundreds of wind blown abandoned open pit uranium mines? What about the contaminates in the air and ground water and rivers? Uranium pollutants with a half life of several thousand years?

What bothers me most about Powertech and like minded companies, is their complete (and yes, I said complete) disregard for the health and welfare of the Native American inhabitants, the farmers and ranchers of the region. In fact, changing weather patterns are whipping up winds that pick up radioactive materials in the West and blow them hundreds of miles from the abandoned mine sites, and therefore affect many of us in the United States.

I request a contested case be initiated in the above matter; I wish to be admitted as an intervener. I would also respectfully request the deadline for filing petitions to initiate a contested case, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation. (How could you publish in conscience such an important notice during the holidays? Merry Christmas, Happy Hanukah, let's talk about radioactive waste proposals!)

Please keep me informed of all proceedings and documents related to this application.

Respectfully,

Michael O'Rourke

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am writing to request that a contested case be initiated in the Ground Water Discharge application submitted by Powertech Uranium. I also request to be admitted as an intervenor in the above application. I have a MS degree in Geology with a concentration in Hydrology and am currently working as a consultant with land conservation non-profits in the West. This application is of special concern to me as I am directly involved in water quality and land use in western South Dakota. I oppose this application because I believe the proposed ground water discharge would create irrecoverable runoff and contamination issues in the mined areas and local drainages, including the Cheyenne River. I oppose this application.

I respectfully request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation, as the Notice was published during the holidays.

Please keep me informed of all proceedings and documents related to this application.

Thank you for your time and attention.

Sincerely,

Regarding: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks,

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. I am concerned about this application because of the proposed ground water discharge and its potential for harming wildlife and creating pollution runoff that will likely affect the Cheyenne River and those who utilize the water. The unanswered questions regarding the effects of the discharge are of great concern to me and it the health of the residents of this and surrounding States is paramount.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

Sincerely,

Philip S. Heckman

Dear Mr. Hicks,

I am requesting to be an intervener pertaining to the waste water discharge plan filed by Powertech Uranium Company. I am concerned about this application because 1000 acres is an extensive amount of land space to spread “treated” nuclear waste material. In looking at other situations in the country, treated water does not necessarily mean potable or safe. My concern is that this would not be safe for humans, animals or wildlife. In the literature, one sees problems with selenium and other materials related to waste water projects. Selenium alone is catastrophic for animals, birds, and humans. There is no way to keep birds from ingesting water from ponds that I know of. I am not clear how Powertech would guarantee that no harmful metals or substances would be in that water. Further, if the water hypothetically were OK, then why is all of this process and drama even necessary???

Additionally, these potential contaminants would be subject to entering our surface water systems and eventually groundwater. Their claims that it is not “expected” to affect the alluvium ring hollow. What if they do? I note that they state that the alluvial gravel ranges 12-33 feet and that this may percolate to 8 feet. That doesn’t bring great consolation to me regarding preventing contamination.

I also am concerned about the general containment of this waste water. They claim to implement an extensive monitoring program. Since the DENR is no longer allowed involvement due to SB 158, I question their monitoring because self regulation by industries has been shown to be a failure. Mention has been made that the EPA and NRC would provide monitoring. In my looking into this, I don’t see this as a reliable plan. Those agencies are not set up to conduct daily or close monitoring and seem to be more “reactionary” oriented rather than “primary prevention” oriented. In my discussions with the EPA in Denver I did not get the impression they would be carrying out the kind of inspection or monitoring that citizens would like to see and demand.

I am also concerned about this waste water plan due to all of the many exploratory holes and abandoned existing wells in that area. I understand that many holes may be there that they don’t even
know about. This would seem to create an easy access for waste water to quickly drop below the 12-33 foot level.

I look forward to learning more as this process ensues.

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. I oppose this application because I believe the proposed ground water discharge by Powertech would seriously harm people, wildlife and contaminate ground water in Western South Dakota. The Cheyenne River and surrounding areas have already been polluted and not returned to an acceptable quality by previous uranium mining in the area. The adverse health impacts from uranium mining have been documented in many locations globally.

I request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation, as the Notice was published during the holidays.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

Sincerely,

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. I am concerned about this application because I am interested in water quality, soil quality, and land use in western South Dakota. I oppose this application because I believe the proposed ground water discharge could create runoff and pollute the Cheyenne River. The proposed area and downstream farms currently produce good food, but no one will buy that food if they know it comes from an area where uranium mining is occurring and the food could be contaminated.

I want the permit application to be denied.

I request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation, as the notice was published during the holidays.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

Sincerely,

[Signature]

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

On behalf of the South Dakota Peace & Justice Center (SDPJC), which counts more than 125 members across the state of South Dakota and of which I am the executive director, I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application.

The SDPJC is deeply committed to protecting South Dakota’s natural heritage and ensuring a clean future for our children and grandchildren. It is this commitment that leads us to concern over Powertech’s groundwater discharge application. We oppose this application because we believe the proposed ground water discharge would harm wildlife, create problematic runoff, and pollute the Cheyenne River.

We leave aside the questionable effects of pumping 9,000 gallons per minute from the Inyan Kara and Madison aquifers, especially during a period of sustained drought. The spraying of waste water from a uranium mine over 1,000 acres, by a company that has never mined anything, troubles us deeply, and we want the permit application to be denied.

We request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, as the Notice was published during the holidays. Especially at this time of year, this is not sufficient time to ensure full public participation.

Please keep us informed of all proceedings and documents related to this application.

Sincerely,

Tom Emanuel
Executive Director, SDPJC

Re: Powertech USA Waste Water Discharge Plan

Please initiate a contested case regarding the Powertech USA Waste Water Discharge Plan for the in-situ-leach uranium mining project Powertech is proposing for the Dewey-Burdock, SD area near Edgemont, SD. I wish to be admitted as an official intervenor in the above matter. I will stand in opposition to the plan and request that you deny the permit in all its forms and permutations.

I own and operate an 8000 acre cattle ranch in the area and I have many concerns about this project.

The project currently calls for an appropriation of 8,500 gallons per minute from the Inyan Kara formation and 551 gallon per minute from the Madison formation. This amounts to about 93 billion gallons of water over the projected life of the project with the vast bulk of this water to be re-injected into the estimated 4000 wells used for mining uranium. The water quality of the Inyan Kara varies considerably in this area. I have a 1710 foot deep Inyan Kara well and a natural flowing spring with excellent water. Powertech characterizes the water in the Dewey Project area as being “brackish” and suggests that they will merely be reinserting already bad water into the wells.

Please note that the water permit request of over 9000 gallons per minute, is most probably not available in the project area. Thus Powertech will be pulling water from the surrounding aquifers from a much wider area and when this is re-injected it will begin to degrade the overall water quality. I expect that the potential contaminants in the waste water to include but not be limited to the following: Heavy metals, arsenic (2 forms), beryllium, radioactive by products, selenium, sulfates, phosphates, calcium, limestone by products, iron and whatever is in the ground adjacent to each bore hole.

These contaminants in sufficient quantity will render the water totally unsuitable for wildlife, livestock, and human use. It generally does not take much of any of these contaminants to render the water toxic for plants and animals.
The US Geological Survey and learned professors, hydrologists, and geologists have indicated that the aquifers “communicate” with each other. The area is further complicated by the Wind Cave structure which is present in the general area. We now have 4 huge open pit uranium mines with contaminanted water in the area which are over a mile across. We have some 70 smaller open pit mines which were abandoned and some 4000 bore holes also not plugged all from uranium mining done in the 1950’s and 1960’s. This should be a Superfund Site.

This site drains into the Cheyenne River Basin. Before this waste water plan is approved, a full characterization of the site and the probable and past movements of water and its contaminants should be done to determine the overall impact on the groundwater, the Cheyenne River and all the underground aquifers, particularly the Inyan Kara and the Madison. Powertech is quick to opine that it is not responsible for previous mining activities and pollution. Then who is?

The Cheyenne River flows into Angostura Dam which is a huge irrigation dam which is also heavily used for fishing, swimming, and boating. Dumping radioactive water with these contaminants in it into this dam will wreck the water recreation and could potentially damage irrigation crops and well as fish. Fishing in the lake begins the chain of events which can lead to human disease, cancer and multiple sclerosis. Wildlife and livestock operations along the Cheyenne and near the Angostura Dam could also be damaged.

Powertech has also asked for a 1000 acre waste water lagoon on which they plan to spray waste water. This will amount a huge “lake” of toxic water which will be 1 ½ miles square, depending on how it is laid out. This will attract birds by the hundreds, and other wildlife which will be contaminated and eventually die from the effects. Dust storms, blizzards, wind events, and wildfires will inevitably spread airborne contamination over surrounding lands. The prevailing winds are Northeast to Southwest. My ranch, other ranches, and Edgemont are in the direct path of this wind borne contamination.

The possibility of treating the waste water to make it less toxic is not workable. Reverse osmosis systems which would yield 15 gallons or useable water and 85 gallons of unusable water for each 100 gallons treated are cost prohibitive and one still has 85 per cent of the water to dispose of. These systems are extremely costly.

Precipitating out radioactive by products of the mining operation is also costly and fraught with problems plus they do not work too well. Arsenic is a particularly deadly contaminate present in an inert status in the dirt in the project area. Once dissolved by the carbolic acid which will be created by the process, arsenic will be very difficult to remove. Thus I am concerned that we will be letting Powertech create huge quantities of very toxic water which they hope to dump underground or spray on the lagoon. Eventually the sludge from the lagoon will have to be removed, a process that often leaks contaminants into the ground, which eventually pollute groundwater and over time make their way into aquifers, local wells, and the Cheyenne River.

Water in the aquifers flows generally south out of the project area, through Edgemont, then south to the former Black Hills Army Depot, then east across my ranch. There is an opportunity to pick up chemical warfare agents present in the ground on the Black Hills Army Depot. These include but are not limited to sarin, soman, toban, mustard, Lewisite, Phosgene, white
phosphorous, and conventional explosive residues. Thousands of tons of these contaminants were dumped in over 200 miles of trenches on the BHAD. These have begun the process of percolating down through the shale formations and may be collecting in fissures, tunnels, pockets and other catch basins in the area. Disturbing these hideously toxic chemical warfare agents by forcing water under pressure into the mining wells simply should not be done. It is far too risky.

I urge you to deny this permit.

Sincerely yours,

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the matter of the Application for a Ground Water Discharge Plan filed by Powertech Uranium of Colorado and that I be admitted as a recognized intervenor in the above application. I am a biologist and Black Hills property owner who is extremely concerned about this application because of the potential devastating effects on water quality, wildlife, traditional land uses, health and safety, and quality of life in western South Dakota. I strongly oppose this application because I believe the proposed ground water discharge would harm people and wildlife, and pollute the Cheyenne River. I can’t believe this is even being considered. I ask that the permit application be denied.

I am sending a copy of this letter directly to Richard Blubaugh of Powertech USA, Inc.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

Sincerely,

Valerie J. Naylor

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. I am concerned about this application because I am interested in water quality, land use, and wildlife in western South Dakota. I oppose this application.

I request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation, as the Notice was published during the holidays.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

Sincerely,

RE: Application for a Ground Water Discharge Plan filed by Powertech Uranium

Dear Mr. Hicks:

I am requesting that a contested case be initiated in the above matter and that I be admitted as an intervenor in the above application. I am concerned about this application because I am interested in water quality, land use, and wildlife in western South Dakota. I oppose this application because I believe the proposed ground water discharge would harm wildlife, create runoff, and pollute the Cheyenne River, and I want the permit application to be denied.

I request that the deadline for filing petitions to initiate a contested case in this matter, currently scheduled for January 18, 2013, be extended until February 1, 2013, to allow full public participation, as the Notice was published during the holidays.

Please keep me informed of all proceedings and documents related to this application.

Thank you.

Sincerely,
